

# Smooth Blue™

*Smooth Blue is predictable.*

*Smooth Blue can help you schedule. Since it has consistent set times, it will demonstrate the same great performance pour after pour.*

Saving time on every job equals saving money!

More predictable scheduling equals saving money!

A smoother more durable finish resulting in fewer complaints, equals saving money!

Saving money equals greater profits.

CBM uses advanced concrete admixtures supplied by Grace Construction Products, the leading manufacturer of concrete admixtures, to provide the newest technology, and highest quality concrete available to the concrete industry today. Smooth Blue is a trademark of St. Marys Cement Inc.

Put a shine on your bottom line...with CBM's

# Smooth Blue™

ready-mixed concrete

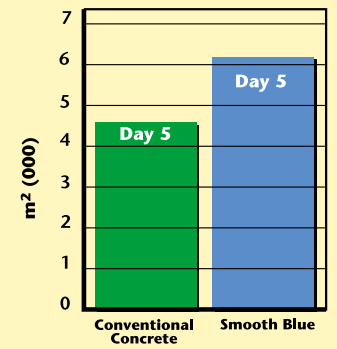

**maximiz**ers  
The Evolution of Concrete

A better finish and reduced cracking  
in less time.

Printed in Canada

Smooth Blue™ ready-mixed concrete dramatically improves workability, finish and set time for all flatwork.

30% Increased Productivity with Smooth Blue (based on five, 8-hr days)

**Smooth Blue™**  
Structurally improved concrete.

Improved dispersion characteristics and more complete hydration increases the compressive and flexural strength of Smooth Blue concrete at all ages.

Smooth Blue is less sticky and flows more readily to provide greater all-round productivity.

Get a better, smoother surface with Smooth Blue.

Excess water can cause segregation in the mix and deterioration of the surface. CBM's Smooth Blue™ ready-mixed concrete saves you time placing, screeding and finishing flatwork resulting in a better, smoother surface without adding water.

Finishers will immediately notice the improved troweling characteristics. Easier, faster floating and troweling, by hand or by machine, results in a smooth, close-tolerance surface with less machine time and less labour. The result is the highest quality concrete surface in the shortest time.

**Smooth Blue™**

Start finishing sooner with Smooth Blue.

Because you can maintain up to an 180 mm slump with less bleed water, you can start finishing sooner with Smooth Blue and even with low w/c ratios, workability is maintained.
