

Notice of Public Open House #2

St. Marys Cement wishes to obtain the necessary permits to proceed with an **Alternative Fuel Demonstration Project** later this year. The alternative fuel demonstration would substitute alternative fuel for a portion of the fossil fuel used at the Bowmanville cement plant over approximately 24 days, in order to gather site-specific air emission data from the plant to determine the environmental feasibility of using certain alternative fuels.

The proposed alternative fuels for the demonstration are post-recycling paper bio-solids and post-recycling residual materials from a recycled paper plant and post-composting residual plastic film from a composting plant.

St. Marys has identified some potential environmental benefits to using alternative fuels including: providing a viable use for residuals that would otherwise be landfilled, a sizeable reduction in the use of non-renewable fossil fuels, and a reduction in greenhouse gas emissions.

St. Marys is hosting a second public open house on the Alternative Fuel Demonstration project. You can drop-in at any time during the session to review information and speak directly with the project team members.

Date: Wednesday September 10th, 2008

Time: 5:00 to 9:00 pm

**Location: The Clarington Beech Centre
26 Beech Avenue
Bowmanville, ON**

For more information please contact: St Marys Cement Alternative Fuels Demonstration Project, by mail at P.O. Box #62066, Burlington Mall Post Office, Burlington, ON L7R 4K2; by phone at 1-888-631-3761; or by email at fueldemo@vcsmc.com. Information is also available on the St. Marys website at www.stmaryscement.com.
